## **Unveiling Empirical Research on Gender**

## Gender theory and empirical research

A reply to IRLA GILLIS

According to Gillis, there are two main approaches to gender: a theoretical approach and an empirical approach. The theoretical approach is based on the idea that gender is a social construct, and the empirical approach is based on the idea that gender is a biological reality. Gillis argues that the theoretical approach is more important than the empirical approach because it allows us to understand the social construction of gender. She also argues that the empirical approach is more important than the theoretical approach because it allows us to understand the biological reality of gender. I agree with Gillis that both approaches are important, but I think the theoretical approach is more important because it allows us to understand the social construction of gender.

In my article, I also discuss drinking situations, as games, and their links to gender. A central element is the gendered forms of drinking situations. As a subject there are previous empirical studies on drinking situations. Theoretically our analysis of gender is documented with the omnivorous idea that all responses and actions are situational. We do not have support that drinking situations vary by gender. Our data is not so. Thus, a gendered view analysis, there are no significant gender differences in the empirical construction of drinking situations themselves, that is, there are no women or men drinking situations. Gillis also discusses the

importance of men and women's different styles of experiencing drinking situations, especially heterosexual men, which refers to specific cultural ways of acting as if one being a woman or a man. Hence, our reading of gender differences in drinking situations should not be taken as an essentializing proposition but as a contextual interpretation.

The validity and reliability of an empirical study depends on how research setting is constructed. The reliability is the ability to repeat the study's theoretical approach, method in analysis, the process, research, and empirical data. Our study can be repeated because gender does not change at the cutting edge of its theoretical focus. This is because our research setting as a whole did not call for that. Previous research on drinking situations does not focus on gender. (Though we aim to notice the tradition, or rather, location of that, we cannot ignore the tradition.) The theories and methods we apply do not consider drinking situations as gender-based. The research, Gillis also considers situations as gendered. The most important thing is, however, that an empirical approach is sensitive to the social context. (Gillis also discusses the

"Fine Comic About Gender" delves into a wealth of empirical research findings that illuminate the multifaceted nature of gender. Statistical data, case studies, and expert insights provide a scientific lens on the social construction of gender, the role of hormones and biology, and the impact of societal expectations on gender expression. This research-informed

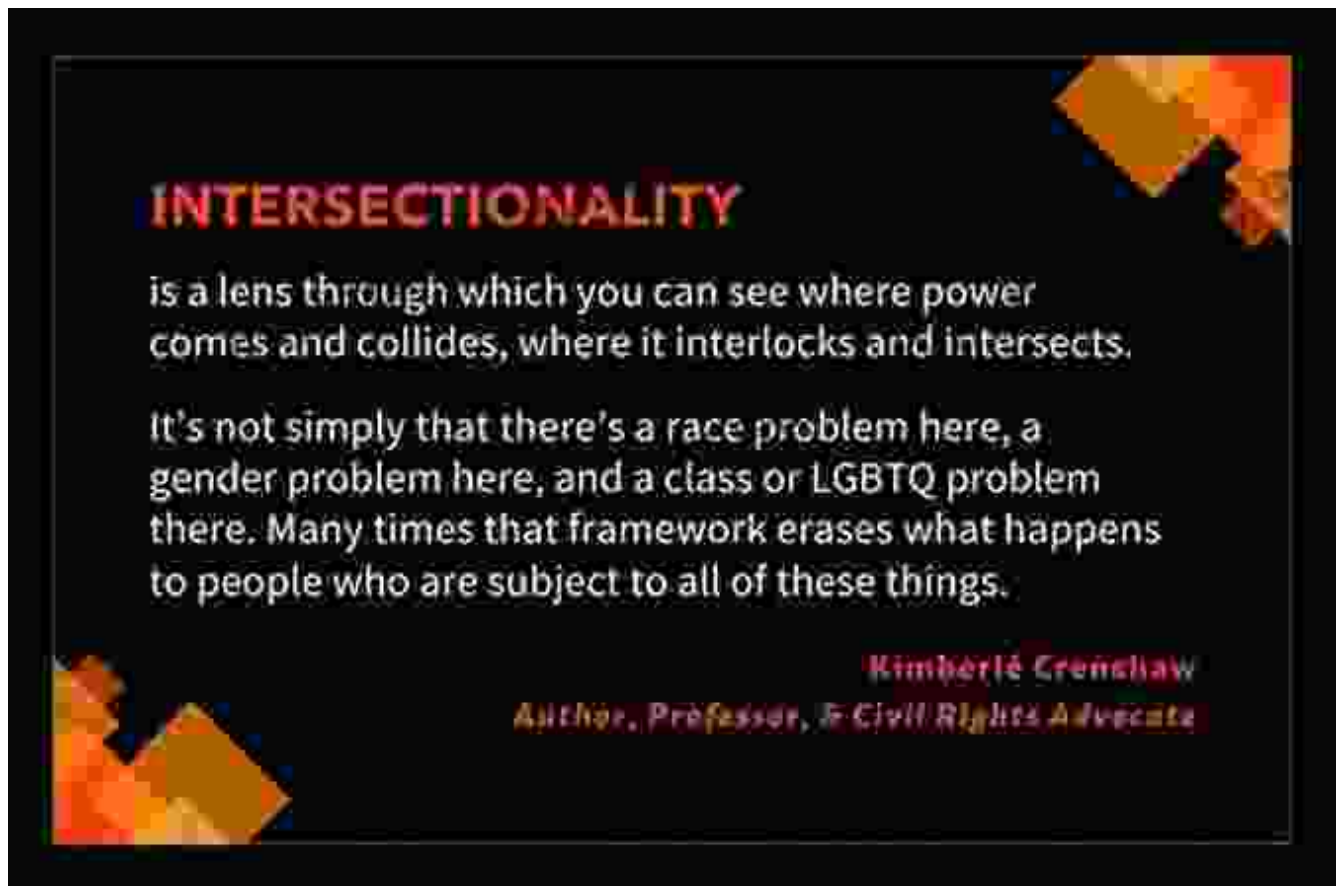

perspective underscores the significance of gender as a fluid and dynamic concept that transcends simplistic binaries.
